

Providing complete network and security visibility

Rebasoft Auditor Core is a next-generation software application designed to give organizations unrivalled visibility into all devices and users connecting to the network. The one, accurate, up-to-date source of what is happening on your network is the network itself. Using standard mechanisms Auditor Core can, in real-time, interrogate the network and catalog every device connected over time.

Auditor Core takes the captured data and correlates the end-device, the allocated network address and, if enabled, the user that has authenticated to the domain. This provides both a real-time view as well as an historic record of all network access. This basic set of information can be used for a variety of purposes within an organization—such as security, problem management, change control and more.

Key Benefits

Total network visibility

Auditor Core helps with operational efficiency by showing all the network and relating it to users—this saves time and effort in managing operational tasks

Reduced downtime

Auditor Core capabilities mean that information can be found faster, leading to improved MTTR (mean-time-to-repair)

Improved network security

Security on a network must start with an understanding of what needs to be secured. Auditor Core provides the foundation for security asset management by showing all users and devices connected to your network

Manage network capacity

Auditor Core capacity planning lets you manage adds, moves and changes more effectively—enabling much better use of your existing infrastructure investment

Fast deployment

Software only (no probes/agents to install or configure) Auditor Core can be installed and commissioned in minutes

User Forensics

User Details:		Tag Details:	
User ID:	leemoores	country:	UK
Domain ID:	REBASOFT	Name:	Lee Moores
When:	08-Oct-2010 17:07:28 to 05-Apr-2012 12:33:21		+

Last Seen Connection (24Hr):

Time:	05-Apr-2012 12:33:21
IP:	10.100.1.52 ()
MAC:	00:18:f3:f4:b4:77 (ASUSTek COMPUTER INC.)
Device:	10.100.1.199 (ex3200-office)
Interface:	ge-0/0/18.0 (), Vlan:3(office). Has 2 mac.

IP Usage History:

User	Tag	IP_Address	Timeline
leemoores	REBASOFT	10.100.1.52	

Auditor Core goes beyond many other systems, in allowing real world information to be reported along with the network; a user will be a real person in a real department in a physical location not just an abstract userID. These relationships can be seen at-a-glance. Auditor Core is open, you do not necessarily need to throw away existing systems; integration and coexistence are part of Core's DNA.

What can Core provide?

Delivering single environment that can serve multiple teams, Auditor Core provides a foundation that:

Improves security

- Real-time Security Asset Management
- Rogue device detection
- Compliance with acceptable use policies
- Combat Malware by identifying potential zero-day threats
- User access anomaly detection
- Hacking / Denial of Service

Speeds problem resolution:

- Improve network availability (Reduce Mean Time To Fix)
- End-to-end visibility – improved user satisfaction
- Integration / coexistence with current systems

System Requirements

System requirements vary depending on the number of sources monitored. The following requirements are a guideline:

- Dual core Intel Xeon or AMD similar processor
- 2GB RAM, although performance will benefit from increased RAM
- 160 GB SATA 7200rpm+ disk (or greater depending on network size and period of storage)
- Windows 2003/2008 server or Linux (VMware supported)
- Internet Explorer V8 or later, Mozilla V3 or later (JavaScript must enabled in the browser)

Technology Features

- Find users by name, IP, device, location and more
- Detailed forensic audit trails
- Watchlist to track roaming devices
- Whitelist alerts for unknown devices accessing your network
- Categorized “Tagging” with external data from HR, Asset management systems and more
- Capacity planning reports
- Build and track change plans
- Easy to navigate web interface
- Extensive integration and full URL controls
- Fast deployment, probe-less

Rebasoft

21 London Road, Twyford, Reading
United Kingdom RG10 9EH

Tel : +44 (0) 800 799 7322
eMail : info@rebasoft.net

Supports capacity/change process

- Drive up return on assets
- Real-time user based resource planning
- Quality control for adds, moves and changes
- Virtualization
- Datacenter consolidation

How does it work?

Auditor Core sits on a central server and uses SNMP to connect to the network. Together with data collected from user authentication systems, Core correlates and reports on

- Who connected to the network
- Where they connected
- What device they used

With this foundation of information, Auditor Core allow users to search by any data captured and provide a variety of reports via the web or other formats

Is it for my organization?

Auditor Core is suited to any type of organization. Auditor Core will be of major benefit to any organization that has

- More than 500 network users
- Users across multiple locations
- A multivendor environment
- Under pressure operationally
- Security / audit concerns

About Rebasoft

Rebasoft delivers next-generation software to enable network and security operations to become more effective. Our company was built by network and security engineers who not only know how to run and secure networks, but also see the limitations in today’s systems that many of our clients use.

Our aim is to continuously develop our products based on best practice and customer need. We aim to deliver out-of-the-box functionality that delivers real benefits. Fast. This means delivering great value, easy-to-use software.

The result, we hope, will change the way people work, delivering significant savings to organisations of all types and sizes.
